

Unlock new possibilities with

ULTRAFORMERMPT

THE ULTRAFORMER MPT'S FLEXIBILITY, WITH ITS WIDE RANGE OF HANDPIECES AND MODES, ALLOWS FOR UNPRECEDENTED PERSONALISED TREATMENTS WITH ELEVATED COMFORT AND PRECISION RESULTS.

The Ultraformer MPT pushes the boundaries of MMFU (Micro and Macro Focused Ultrasound) technology. With its cutting-edge thermal coagulation capabilities, Ultraformer MPT offers fast, efficient treatments with unmatched versatility to tailor treatments to individual patient needs.

The Ultraformer MPT is the latest advancement in the Ultraformer series. It utilises the same proprietary MMFU technology as its predecessors while introducing groundbreaking features— including advanced thermal coagulation point technology, which offers 25 times finer precision. This innovation results in shorter treatment times, more tailored treatment and enhanced patient comfort.

One of the most anticipated additions to the Ultraformer MPT

is the Ultra-Booster handpiece. A technological innovation that gives the MPT a clear advantage. With three cartridges offering depths of 1.5mm, 3.00m and 4.5mm that can be used in MP Mode and Normal Mode, this next generation MMFU is designed for optimal efficiency and unprecedented precision. Used in conjunction with the exclusive to Ultraformer MPT Deep Synergy Booster, a synergistic blend of active ingredients including PDRN, hyaluronic acids, peptides, amino acids and a blend of antioxidants for enhanced treatment results including superior hydration, firming and brightening.

The advanced technology also allows for quicker procedures, making it an ideal choice for busy practices looking to offer best-in-class, patient-friendly treatments.

Q&A with Dr Craig Layt Plastic Surgeon, Southport, Qld

How long have you been using Ultraformer technology, and why did you choose to add the Ultraformer MPT to your practice?

We have been using Ultraformer technology for several years. We upgraded to the Ultraformer MPT because it represents the latest advancement in High-Intensity Focused Ultrasound (HIFU) technology. This device allows us to target specific areas of the face and body more precisely, improving patient comfort.

The addition of the MPT mode, which includes the Ultra-Booster handpiece for serum infusion, enhances the overall treatment experience by offering immediate and noticeable contouring results without downtime.

The system's ability to offer tailored treatments for individual patient concerns, whether targeting fat reduction, skin texture or laxity, makes it a versatile addition to our clinic.

patient and for a wide range of concerns, within a single session. Whether the goal is fat reduction, improving skin texture and tone or addressing laxity, the versatility of this device ensures we can provide focused treatments for specific areas, delivering comprehensive results for various concerns. This adaptability benefits our patients by providing a tailored approach to their unique needs, leading to higher satisfaction.

How does this versatility benefit your practice from a business perspective?

It allows us to serve a broader demographic by addressing various aesthetic concerns, from facial contouring to body sculpting. This wide range of treatment options not only attracts a diverse patient base but also increases patient satisfaction as we can customise treatments to meet their specific goals.

THE ULTRAFORMER MPT'S PRECISION, VERSATILITY AND ABILITY TO DELIVER NOTICEABLE RESULTS WITH MINIMAL DOWNTIME MAKE IT A VALUABLE TOOL IN OUR PRACTICE.

BEYOND NO.1 WITH ULTRAFORMER MPT ELITE HIFU

- Tailored and precise treatments
- Enhanced patient comfort
- Infinitely expandable
- Multi-select MMFU delivery
- Ultra-Booster handpiece
- 2.5 faster treatment time

How does the Ultraformer MPT more efficiently and precisely deliver ultrasound energy to targeted areas?

It combines the original ultrasound mode with advanced MPT technology to deliver energy to targeted areas. This combination allows for controlled delivery, ensuring the energy reaches the specific depths required for effective treatment. The ability to adjust settings according to each patient's needs helps us provide safer, more personalised care, making the treatment both precise and effective.

Does this translate into more versatile treatments?

Absolutely, as it allows us to tailor treatments to the unique needs of each

Anything else you wish to add?

The Ultraformer MPT represents a significant advancement in non-surgical aesthetic treatments. Its precision, versatility and ability to deliver noticeable results with minimal downtime make it a valuable tool in our practice. We're excited to continue offering cutting-edge treatments that help our patients achieve their aesthetic goals safely and effectively. **AMP**
